Project Name	To Supply Left Over Food.
Maximum Marks	4 Marks

Project Overview

Supply Leftover Food to Poor

This guided project demonstrates how to supply leftover food to the poor utilizing Salesforce, streamlining surplus food collection and distribution to the needy, ensuring efficiency and transparency. It begins by creating test donors and assigning food inventory to them. A business rule is then created to enforce the restriction that ensures proper tracking and distribution of food items to those in need. This ensures important resources are preserved and prevents accidental misallocation of food items that are still available for distribution.

The workflow also includes a test scenario to validate the behavior. First, a test is performed with unallocated food inventory to confirm that distribution is allowed when surplus food exists. Finally, an attempt is made to distribute unused food items, verifying that the system permits this action without any errors. This process helps administrators maintain accurate food distribution records while enforcing necessary safeguards.

Step-1: Team Gathering, Collaboration and Select the Problem Statement:

Reference: <https://www.mural.co/templates/brainstorm-and-idea-prioritization>

Step-2: Brainstorm, Idea Listing and Grouping:

Brainstorm: Team members share ideas freely to explore solutions for supplying leftover food to the poor without judgment, encouraging creativity and participation.

Idea Listing: All ideas from the session are written down to capture every suggestion for food collection and distribution, ensuring no input is overlooked.

Grouping: Similar ideas are organized into categories to identify patterns, highlight priorities, and simplify decision-making for efficient food supply.

Action Planning: Chosen ideas are turned into clear steps with assigned responsibilities and timelines for food distribution implementation.

Step-3: Idea Prioritization:

Idea Prioritization: Idea polarization helps break down this complex food supply project into clear, focused components. In this project, the main goal is to supply leftover food to the poor if the food inventory is available for distribution. This approach ensures that resource efficiency and accountability are maintained during critical distribution workflows. By polarizing ideas, we can separate food collection processes from routine distribution tasks.

It also helps in highlighting the importance of food resource security and controlled access. Each step, from detection to distribution, becomes easier to plan and implement. Clear visual representations like diagrams and flowcharts can simplify communication. Overall, idea polarization strengthens project clarity and supports smooth execution.
