Customer Problem Statement

Restaurants, hotels, and food businesses face challenges in managing leftover food inventory. Currently, surplus food is often discarded, leading to wastage and environmental concerns. There is no efficient way to connect food donors with distribution partners or track food availability in real-time. This creates missed opportunities to help underprivileged communities and results in operational inefficiencies. They need a centralized platform to collect, track, and distribute leftover food to the needy, ensuring maximum utilization and social impact. A streamlined notification and automated matching system would help prevent food waste and reach beneficiaries effectively. This solution will improve resource efficiency, reduce environmental impact, and build stronger community engagement.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Restaurant Owner	Donate leftover food to the needy	The process is difficult and time-consuming	There's no platform to connect with NGOs or track food distribution	Guilty and helpless
PS-2	An NGO Manager	Source and distribute food efficiently	Food collection is unorganized and unpredictable	There's no real-time visibility of available food donations or donor details	Stressed and inefficient

Problem Statement PS-1

As a restaurant owner, I am trying to donate leftover food to underprivileged communities, but the system makes it difficult to find reliable distribution partners or track where my donated food goes. This limitation makes me feel guilty and helpless, as I want to reduce food waste but lack a structured way to connect with NGOs. It interrupts my operations and creates uncertainty about the impact of my contributions. I need a better platform to identify distribution channels and verify that donated food reaches those in need.

Problem Statement PS-2

As an NGO manager, I want to source and distribute food efficiently to beneficiaries in our community. However, food collection is unorganized, and I have no real-time visibility of available donations or reliable donor contacts. This causes uncertainty in food supply, affects our ability to plan distribution schedules, and reduces operational efficiency. Stressed and frustrated by manual coordination, I cannot scale our impact. An automated platform with real-time tracking and automated donor matching would streamline operations, improve coordination, and help us serve more people effectively while maintaining transparency with all stakeholders.
