

Ideation Phase

Empathize & Discover

Date	03 NOVEMBER 2025
Team ID	NM2025TMID03627
Project Name	To Supply Left Over Food
Maximum Marks	4 Marks

Empathy map

In the Empathize & Discover phase, the team observes how food donors, volunteers, and recipients interact with the surplus food collection and distribution system. They learn that many stakeholders feel frustrated by inefficient coordination, lack of transparency in food inventory, and difficulty tracking distribution routes. By interviewing donors, volunteers, logistics partners, and beneficiaries, they uncover that this issue causes food wastage, delayed deliveries, missed distribution opportunities, and uncertainty about where food goes and who receives it.

Gathering these insights helps the team see the real impact on food security, resource management, and community trust. Understanding the stakeholders' daily challenges makes it clear that better visibility, real-time tracking, automated coordination, and transparent reporting are needed. These discoveries will shape solutions that are practical, scalable, and user-friendly.
